

SRS . . .
Voltage controller

Characteristics

- Easy installation
- Effective constant current transmitter
- Current transformer output
- Effective value display

These devices are used for voltage control. By use of the voltage controller the effective current for the heating is adjusted. The adjustment is controlled at the ampèremeter and if necessary monitored at min. current via TRB-Pie. or rather TRB-PI.

- Constant output voltage by control to the adjusted setpoint value
- Activation and deactivation via optocoupler (VDE 700 - 730)
- Current transformer output (according to VDE 0551)
- Effective value display
- Regulating variable for analog controller (y-input)*
- as effective constant current transmitter*
- for different y-input signals

TECHNICAL DESCRIPTION

Display

Depending on requirements the display device can, for the purpose of improved reading of the operating current, be delivered with measuring range end value 26A, 15 A or 6 A. Current transformer output always 0 - 1 A.

Switching input (Heating off)

The switching input via optocoupler is as standard designed for a voltage of 6 to 24 V~, alternatively for current input 1,5 to 20 mA

Fuses

The voltage controller SRS has two fuses with 80 mA for the internal supply voltage.

Current transformer output

The current transformer output is designed as transmitter for the current input of the temperature controller TRB-P.

y- actuating variable input

Devices, which are equipped with this buffer amplifier, serve as correcting element for analog controllers. The output voltage has to be limited to the desired max. value by use of the potentiometer with voltage scale (serves as overload protection or for the limitation of the overshoots during the adjustment).
